EG 1000 INTERNET GATEWAY

NOMADIX ®

Deliver a quality guest internet experience with a compact, robust solution

Most guests and tenants agree that fast and reliable internet access is the top amenity required when choosing a place to live or stay. As time on mobile phones, TVs, computers and devices continues to exponentially increase, a solid management foundation is critical to ensure continuous satisfaction and loyalty.

The EG 1000 gateway is the ideal product for smaller venues, including hotels, apartment buildings and retirement communities. Offer reliable, robust Wi-Fi to stream shows, make video calls, enjoy gaming, work, shop online, and more - across the property 24/7.

Our new internet gateway builds on Nomadix's strengths as the preferred MDU and hospitality connectivity solution. It packs the same features and functionalities — including our powerful and patented bandwidth management — into a compact format and is now available for smaller properties.
